

- ❖ Small layout changes on Home page (based on Screenshot 1)
 - Move 'Types' menu up
 - Include Sun/Moon icons
 - Move 'Notifications' to the top banner
 - Replace with Bell icon (attached)

Original - Screenshot 1

Layout change

Image of how the home page should look is included below.

❖ Replace Category checkboxes with Buttons

We would like to use these native Angular buttons to replace the category checkboxes:

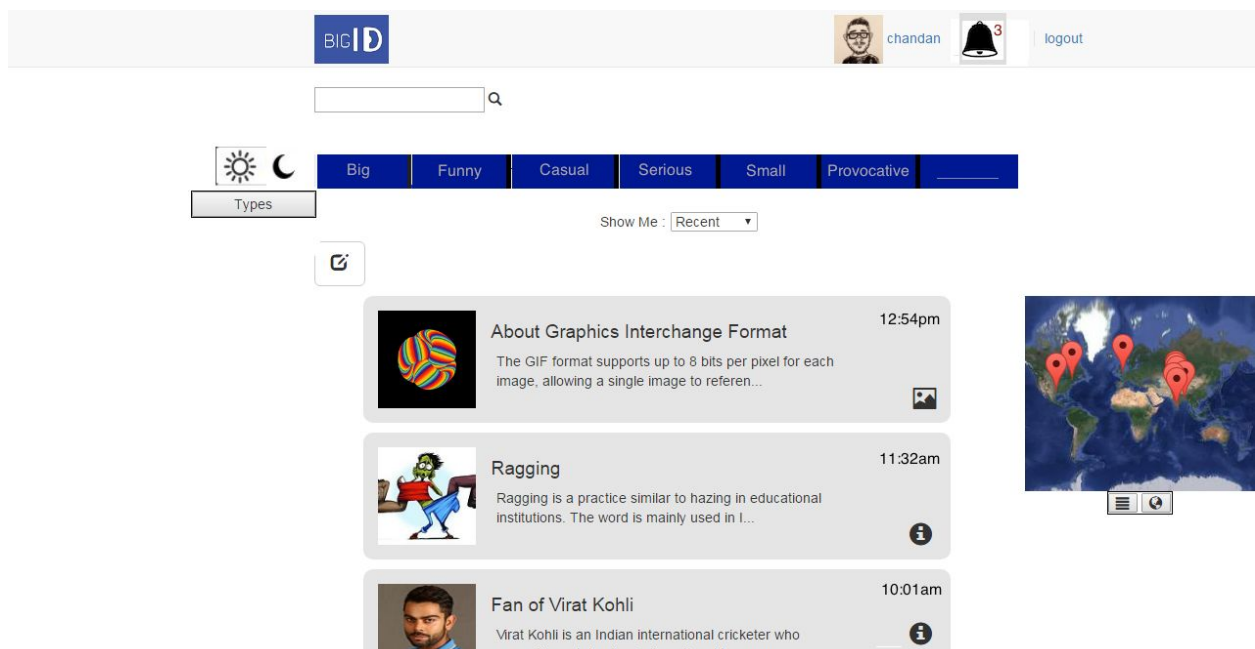

<https://material.angularjs.org/latest/demo/button>

On

Off

According to our measurements, font size 16 should allow all the Category names to fit in each of the 7 buttons *of the same size*.

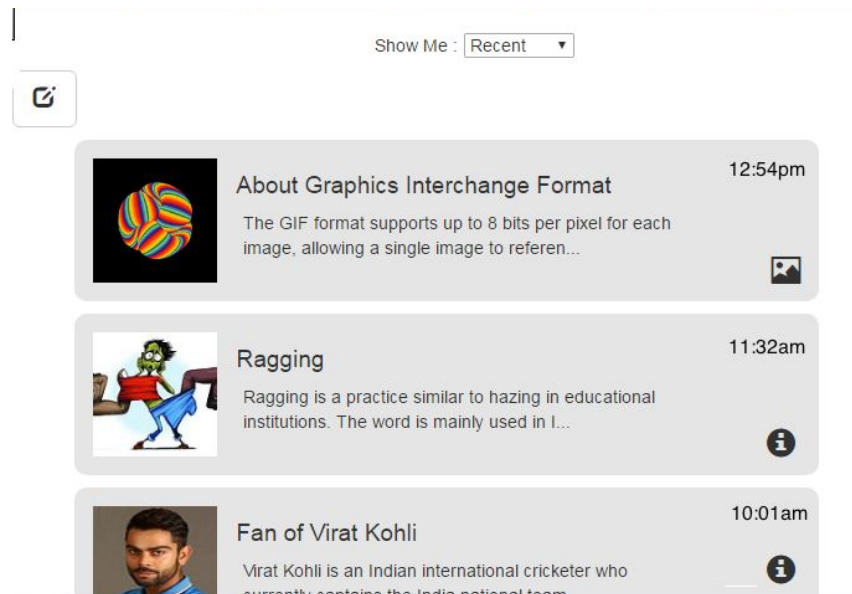

Demo image of Home page (attached as well)

- ❖ Add to Show me: [based on Screenshot 2]
 - Quality (highest saves)
 - Saved (posts user has saved)
 - If possible/feasible, Near me (order posts by proximity to user)
- ❖ Move (x) icon on enlarged ID to full top-right

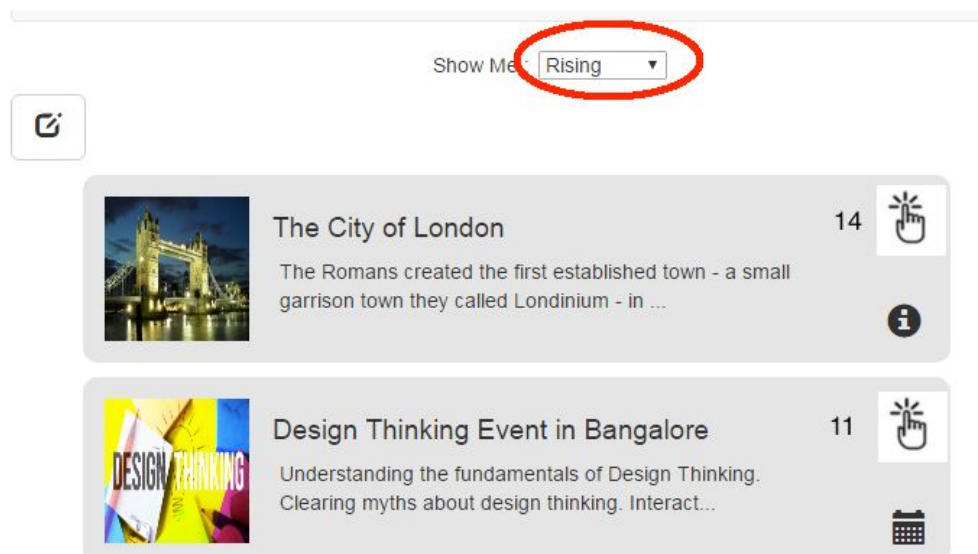

Proposal to modify un-enlarged ID view based on current 'Show me' setting

- ❖ If user is on 'Show me' ____, display appropriate metric and icon in top right of ID.

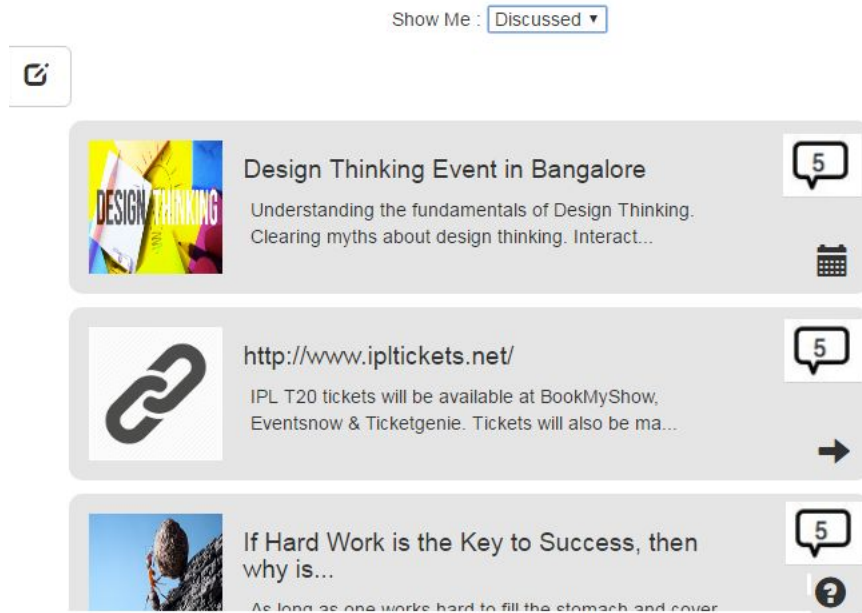

Examples:

“Show me: Recent” → display Time on top-right

“Show me: Rising” → display Push count on top-right

“Show me: Discussed” → display Comment count on top-right

And similarly:

Show me option	Display on top-right
Recent	Time
Votes	Vote count (with upvote/downvote buttons if possible)
Discussed	Comment count
Following	Username [posted by]
Rising	Push count
Random	Dice icon (attached)
Quality	Save count (with Save button if possible)
Saved	Time of Save (if possible)
Near me	Location [name]

When the user clicks this [un-enlarged] ID, they should be shown the same enlarged ID that we currently have. *This modification would only apply to un-enlarged ID's on the home wall.*

❖ We would like to write the notifications messages as follows:

Action	Message	Icon
Votes (5)	5 people have <i>voted</i> on your id ____ (name of id) ____ [counting net votes: upvotes+downvotes)	 [same as Upvote/Downvote buttons, without number in middle]
Saved (5)	5 people have <i>saved</i> your id ____ (name of id) ____	 [same as Save on id]
Comments	User ____ (name of user) ____ <i>commented</i> on your id ____ (name of id) ____	 [same as Comments on id]
Reply to Comment	User ____ (name of user) ____ has <i>replied</i> to your comment on id ____ (name of id)	 * [new icon, attached]
Push	____ (name of user) ____ has <i>pushed</i> your id ____ (name of id) ____	 [same as Push on id]
Following	____ (name of user) is <i>following</i> you	 [as is]
Created [other user who has Post Notifications turned on]	____ (name of user) ____ has <i>created</i> an id	 [as is]
Marked as ____	Your id ____ has been <i>marked</i> as ____ (NSFW/OFFENSIVE/SPAM) ____	 [current icon]

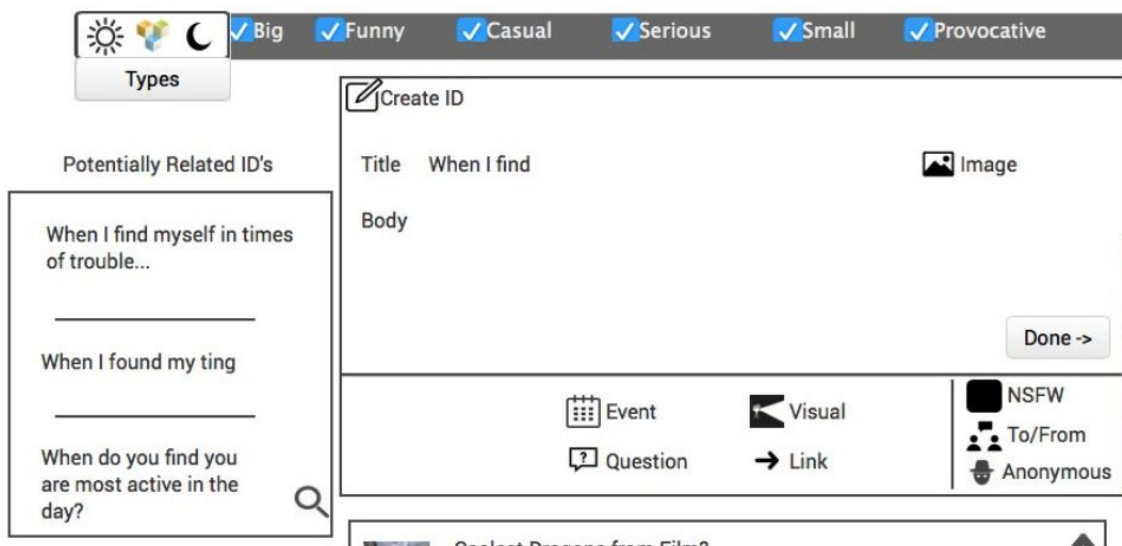

[Note: please change “post” to “id” wherever it appears.]

Lastly, it would be best if the Notifications menu could open on the right side of the page, to cover the Map instead of the Feed.

- ❖ Small addition to search
 - If the users' search parameters yield no results, display the following message:
 - There are no id's matching your search, but we encourage you to post the first!

Pending Questions:

- ❖ We meant to ask about this during our last meeting but did not get a chance to, but are we able to show users pre-existing IDs that that match their input ["Potentially Related ID's"]?

Screenshot from Specs (Justinmind Wireframe)

- ❖ Will users be able to move up and down the feed with the up/down arrows on the keyboard?
- ❖ Should have asked this long back, but is the website responsive? Will it display and function properly on mobile?
- ❖ *Does each id have a URN? We just want to confirm that we will be able to add the feature of linking internal users and external viewers to a specific id.*
