Functionality

Post Creation
- Currently can only post 'General' type id's with image attachment
  - Users should not have to attach image for id to post to wall
  - Same for Account creation - users should not have to upload an image to create account (refer to bottom, 'Error Handling')
- "To/From": post should be created even if only one of To/From is filled in
- Title should not be mandatory
  - If post has either Title or Body, it should be allowed to post on the wall (refer to bottom, 'Error Handling')

Logged in page
- Saved post functionality
  - Currently unable to Save posts (when clicking on (+) button on id), or view Saved posts using the 'Show me' option. There doesn't seem to be a table in the DB for saved posts either. This is a crucial feature and we just want to make sure it is there [both the ability to Save id's and access them later using 'Show Me' option]
- Number below (+) [save button] should reflect the number of Saves the post has, not the number of Tags attached to the post
- Users should not be able to delete tags assigned to any id
- Types menu should have all types toggled on by default, analogous functionality to Categories
  - Currently not working
- Sun & Moon Icons (refer to specs)
  - Sun: All Categories & Types on
  - Moon: All Categories & Types off
- Push & Report as NSFW (after Upvote and Downvote respectively) seem to be missing
- Search not working
- Map not plotting pins
  - Also disappears if user drags it slightly too far on any side

UI

Account Creation
- Switch username & password verification messages:
  - "Username should be at least 2 characters"
  - "Password should be at least 6 characters" (as is)
- Ask for Location during account creation (before Birthday)
- Change text on 'Pro Pic' upload button to "Avatar"

Logged in page

Layout
- Logo dimensions are stretched, adjust to its default dimensions (on account creation page as well)
- Place Settings icon on top toolbar
- Align top-right corner of "Types" button with bottom-left corner of Categories bar
- We need the top & left/right margins of Category bar for background design, *please send whenever possible*

id's
- Post Creation: When user is prompted to input Category, Type, Tags, and Location, the 'General' icon should be the hot air balloon and not the "(i)"
- In Replies to Comments on id's, change 'Like' (thumbs up) icon to upvote icon; [okay to not add downvote]
- Display 'To/From' on enlarged id's (working on a previous build but not on current build)
- Image attachment crashes with not-small images

Error Handling

- The only cases in which the user should be shown an error message are the following scenarios:

1. Account Creation - user does not enter valid username/password
   a. Location, Birthday, and Avatar are optional; account should still be created if these fields are not provided
2. Post Creation - user does not enter either Title or Body
   a. Id should still be posted as long as it has one of Title or Body
   b. Should not require image attachment, tags, or location; id should still be posted if these fields are not provided
      i. With the exceptions of 'Visual' type which should require an image attachment; and 'Event' which should require a input date
      ii. If Location is not provided on id, use Location from user profile; else leave empty.
   c. If user violates something that causes their id to not be posted, show the error message without deleting the id-in-progress

3. Server/DB/Connectivity Issue - "Sorry, We are having connecting you to TheBigId, please try again later"

Note: My father suggested we consider using a Docker Container: https://www.docker.com/what-docker. Just an idea, perhaps it will help some of the "on my machine" problems we all seem to be experiencing.
